

## Dry Fit Instructions

### TOOLS:

1. Dry Fit Templates (enclosed on backside)
2. Boat Legend (shows all parts on 1 drawing with part numbers)
3. Dry Fit Information Worksheet (Enclosed)
4. Scissors
5. Sharpie style Marker
6. Masking tape

### INSTRUCTIONS:

1. Use scissors to cut out each templated part leaving as much Tracing Film as possible around each part in case you need to notate an increase in size.
2. Place each part on your boat in the exact position to which it will be applied. \*Note, if there is a molded-in pattern on your boat then the parts should be aligned to the pattern.
3. Referring to the template ID # located in the bottom right corner, use this part ID # to reference any changes needed to a specific part and log that information on the Dry Fit Information Sheet.
4. Place each template in it's appropriate location; if the fit isn't correct, identify changes necessary on the Tracing Film as well as the Dry Fit Information Worksheet.
5. If a size increase is needed beyond the space left after cutting out each part you can attach more Tracing Film to the edge and tape from the underside, and then mark your tracing. You can also show a notation of the area to be expanded and by how much without adding more Tracing Film.
6. If no changes are required there is no need to send the dry fits templates back
7. If dry fits are correct "As Is" then you can simply reply to your original "drawing approval email" and follow the instructions provided by the sales representative.
